DATE MAILED: 09/25/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)	
	10/802,562	COLEMAN, JEFFREY L.	
	Examiner	Art Unit	
	Yalkew Fantu	2838	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 26 May 2006.
 2a) This action is FINAL. 2b) This action is non-final.
 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1-14 is/are pending in the application.
 4a) Of the above claim(s) 14 is/are withdrawn from consideration.
 5) Claim(s) _____ is/are allowed.
 6) Claim(s) 1-13 is/are rejected.
 7) Claim(s) _____ is/are objected to.
 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 a) All * b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 3, 5 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Modgil (US 2002/0111756).

With respect to claims 1 and 7, Modgil discloses a battery safety monitor system (¶, lines 1-5) comprising: at least one battery (fig. 3, 104) comprising at least one cell string, wherein said at least one cell string is capable of outputting voltage signals; at least one zener diode (fig. 12, 1232), operatively coupled to said at least one battery cell string 104, capable of receiving and reducing voltage signals, and capable of outputting voltage signals (18 V zener); at least one safety device (fig. 3, 356, and fig. 12, 1232; ¶ 90, lines 1-6), operatively coupled to said at least one battery cell string (104, is a definition of a battery), capable of preventing damage to said at least one battery cell string; a microcontroller (fig. 12, 300), operatively coupled to said at least one zener diode 1232, capable of receiving and outputting data; display device (fig. 15, 1530), operatively coupled to said microcontroller 1528, capable of receiving data, and capable of displaying at least one battery voltage level (capable about 5 volts); a power supply (fig. 15D, 1518), operatively coupled to said microcontroller 1528 and said display device

1530, capable of supplying power to said microcontroller 1528 and said display device 1530.

With respect to claim 2, Modgil discloses safety device is selected from the group consisting of PTC, thermal fuse, fuse, isolation diode, wetness detector and optoisolator (fig. 15 D, 1518-fuse).

With respect to claim 3, Modgil discloses a display device (fig. 15, 1530) is selected from the group consisting of visual alarms (blinking light of 1530), audible alarms (1534, speaker), relay switches (fig. 16, 1614) and serial interfaces coupled to display computers (1532 and 1530).

With respect to claim 5, Modgil discloses a battery safety monitor system further comprises an A/D converter (fig. 12, A/D Converter), operatively coupled to said at least one zener diode (1232) and said microcontroller (300), capable of converting voltage signals to digital signals, and capable of outputting digital signals (¶ 31) to said microcontroller (300), and capable of receiving control signals from said microcontroller.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4, 6, 8-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Modgil 9US 2002/0111756 in view of Kopera (US 5,646,534).

With respect to claims 4 and 8, Modgi discloses a battery safety monitoring system, a zener diode capable of receiving voltage signals, and an A/D converter, but does not disclose a plurality of batteries and an analog multiplexer, and an optoisolator.

Kopera, however, discloses a plurality of batteries (fig. 1, 14) and an analog multiplexer 30 (see also col. 3, lines 21-22), an optoisolator (fig. 1, 20).

Modgil and Kopera are analogous arts because they are from the same field of endeavor namely battery monitor for vehicles and safety system.

At the time of the invention it would have been obvious to a person having ordinary skill in the art to provide plurality of batteries, analog multiplexer and optoisolator as taught by Kopera to the vehicle safety of Modgil to ensure the safety of the battery of a vehicle.

The motivation would have been that the use of multiple batteries is used to produce more enough power for cars and vans (col. 2, lines 41-43); and a analog multiplexer used to multiplex multiple inputs into one output (see col. 3, lines 20-32); and an optoisolator to transmit a high power digital signal across the boarder to the low voltage non-isolated side (col. 4, lines 33-37).

Therefore it would have been obvious to combine Modgil with Kopera for the benefit of battery safety - security system to obtain the invention as specified in claim 4.

Regarding claim 6, Modgi discloses a battery safety monitoring system with a microcontroller, display device and a power supply, but does not disclose an optoisolator. Kopera, on the other hand, discloses an optoisolator (fig. 1, 20). It would have been obvious for one having ordinary skill in the art would provide an optoisolator

to transmit a high power digital signal across the boarder to the low voltage non-isolated side (col. 4, lines 33-37).

With respect to claims 9 and 10, Modgi discloses a battery safety monitoring system with data collection and display device and a microcontroller, but does not disclose an optoisolator with a serial interface and a connector (or UART) operatively coupled to optoisolator. Kopera, however, discloses an optoisolator (fig. 1, 20) operatively coupled to said microcontroller 52; a connector (the boarder 20, see col. 4, lines 34-36; UART (Universal Asynchronous receiver/transmitter) is a well known connector used to connect or interface a microcontroller to its serial device, and is inherent to a microcontroller, specially imbedded in the microcontroller of the vehicle's safety system) (claim 10), operatively coupled to said optoisolator and, capable of receiving and outputting digital signals (48), and capable of receiving and outputting power (64). The motivation would have been that since optoisolator is used in preventing reverse current and is a combination of a photodiode and a phototransistor where an optical signal from the photodiode is transmitted across the boarder (considered as a connector between 16 and 18; see fig. 1) on the low voltage side (col. 4, lines 33-36).

Regarding claims 11 and 12, Modgil discloses a battery safety monitoring system with a microcontroller and A/D converter, but does not expressly discloses said connector comprises long wire and a wet (moisture) detector respectively.

Kopera discloses connector comprises long wires (col. 2, 1-8). These wires help transmit battery voltage and battery temperature signals from the battery monitor to the

vehicle controller (col. 2, lines 3-5). Regarding a wetness detector, it is implicitly defined (electrolyte leakage of a battery is detected when a voltmeter (voltage sensor) or a thermal sensor reads a decrease in the temperature of a battery due to electrolyte leakages; voltmeter and temperature sensor are inherent of a vehicle safety monitoring system).

Regarding claim 13, Modgil discloses a data collection and display device (fig. 15, 1530, 1528), a display device, a power supply and further comprises: a second microcontroller (it is obvious that a typical mid range vehicle has as many as 50 or more microcontrollers), but does not expressly disclose a digital MUX. Kopera, however, discloses a multiplexer 30 (see also col. 3, lines 21-22, but the multiplexer is an analog mux that receives voltages signals of analog inputs; and at the time of the invention it would have been obvious to a person of ordinary skill in the art to provide a digital multiplexer that receives a digital signals and select from one of the plurality of theses signals).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yalkew Fantu whose telephone number is 571-272-28928. The examiner can normally be reached on M - F; 7- 4.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Karl D. Eastom can be reached on 571-272-1989. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
